

Trench Shields

Xterra Trench Shields are certified by a Registered Professional Engineer and are designed to exceed OSHA safety requirements. Standard shields are available in 4" to 8" thick walls and have a full range of heights and lengths.

No matter your application, our line of trench shields will meet your needs. Whether it be a single wall shield for shallower depth, or a heavy duty double wall for the deepest of excavations, Xterra has you covered.

Custom applications are also available to meet your specific needs. Xterra's standard shields come equipped with reinforced lift eyes, universal collar size, and tabulated data. Pins, keepers, and a variety of upgrades are available upon request.

Xterra Trench Shields are built to last. When you are down in a trench, choose the brand that you can rely on.

1. XTERRA CERTIFICATION NAME PLATE
2. HIGH-TENSILE STEEL CONSTRUCTION
